SUMMARY

- Experienced front-end developer with expertise in **Angular, React, TypeScript**, and **RxJS**
- Built and maintained 10+ reusable Angular components for a SaaS app, reducing bugs by 40%.
- Driven by curiosity and a commitment to excellence in tackling challenging problems. Focused on delivering thoughtful, high-impact solutions while embracing continuous learning to contribute meaningfully to organizational goals.

WORK EXPERIENCE

RenewBuy.com

Gurugram

Software Engineer

October 2022 – Present

Roles & Responsibilities

- Contributed to the development of Renewbuy, an insurance brokerage platform offering services for purchasing and comparing life, auto, and health insurance, as well as loans and credit cards.
- Designed and implemented responsive websites, mobile applications, and landing pages, ensuring a seamless user experience from concept to deployment.
- Standardized all output with a new, responsive, mobile-first approach and strategy.
- Collaborated with UX/UI teams to assess and enhance the technical feasibility of designs, ensuring consistent, user-friendly interfaces.
- Developed interactive reports and data visualizations in graph format, delivering actionable insights as per business requirements.

CURRENT PROJECT

Consumer Dashboard

- Contributed to the development of **Renewbuy.com**, a user-friendly platform for direct insurance purchases (RB D2C Health and RB D2C Life).
- Developed a user-friendly insurance purchase flow including **plan selection** and **premium calculator**.
- Focused on simplifying the insurance purchasing to offer **convenient and streamlined user interactions**.
- Created **reusable UI components** and **services** (form fields, modals, dropdowns, policy cards) to ensure consistency and scalability.
- Led **architecture design** to ensure scalability, maintainability, and performance of the platform.
- Collaborated effectively with the team to troubleshoot and **fix bugs**, ensuring a smooth and bug-free user experience.

PERSONAL PROJECT

Food Recipe App (React)

- React, React Router, JavaScript, TheMealDB API, CSS
- Developed a responsive food recipe search application using **React** and **TheMealDB API**.
- Implemented **live search** functionality with API integration to fetch and display meal data.
- Displayed default results on initial load and managed user input with controlled components.
- Ensured clean UI with conditional rendering, user feedback messages, and error handling.

News Application

- News application is focused on connecting news from all around the world and delivering it to users as fast as possible in the best visualized way.
- News Application is a simple application structure built using JavaScript, HTML and CSS for Frontend and using "<https://newsapi.org>" API's for Backend .

EDUCATION

Krishna Engineering College, Ghaziabad

Uttar Pradesh, India

Bachelor of Technology – Computer Science and Engineering; GPA: 7.55

August 2019 – July 2023
